SEE BELOW C&C LR GRA MODEL ANSWER

WRITING TASK 2

You should spend about 40 minutes on this task.

Write about the following topic:

Despite the benefits of exercise, a sedentary lifestyle is increasing in the contemporary world.

What problems are associated with this?

What solutions can you suggest?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 250 words.

Original answer -

In a world increasingly defined by technological advancements, a sedentary lifestyle is becoming increasingly common globally, with many individuals suffering from several health issues. To address this worrying trend, a recalibration of values that prioritise human well-being is urgently needed.

What begins as an inactive lifestyle gradually turns into simple but serious consequences: when people move less, they are more likely to suffer from cardiovascular diseases, overweight, and obesity. What is more destructive is that inactive individuals may also be vulnerable to mental health issues, as they are often withdrawn from meaningful social activities. These health issues together may have a cascading effect on every aspect of life. For individuals, these challenges mean

lower quality of life. For societies consisting of such members, this means inadequate human capital, lower productivity, and ultimately stagnant economic growth.

At first glance, education programmes or social campaigns to raise awareness of individuals of the detrimental effects of a sedentary lifestyle seem to be straightforward and convenient. However, these solutions often merely scratch the surface. An inactive lifestyle is never random. It is often a downstream consequence of a broader malaise, in this case, the increasingly competitive global economy which glues many to their desks in order to produce more. As such, merely asking people to live more healthily is philosophically shallow. In my view, interventions at institutional levels are needed. Governments must require firms to adjust their policies to allow their workers to have more quality time to focus more on healthier lifestyles. In China, the saturated labour market has forced many to work more than ten hours a day, leaving them with little room for meaningful physical activities. Only when situations like these change can we hope that individuals will focus more on active lifestyles.

In conclusion, a sedentary life style is often linked to health issues, but it should be seen as a threat to the human capital of every country. To encourage individuals to adopt healthier ways of life, we need to look upstream at how the modern economic system is designed. Until governments, alongside firms, recalibrate their priorities, any education or social programmes will still remain performative optics which bring little result.

OVERALL BAND SCORE **8.5** **9+9+8+9**

TR – Task Response nb – GRA and LR errors have not been corrected

Band score 9

You blamed the work environment for the problem, ignoring the fact that even the unemployed and students lead sedentary lives. Clearly, the problem can't be solely attributed to working long hours, and besides, working longer hours is not a new phenomenon. In fact, you

missed the elephant in the room, namely social media and gaming, or more generally, tech devices.

Obviously your proposed solution would never be implemented – governments are far more strongly influenced by corporate interests than by the health of its people, whatever they might say, but even if it was implemented, people wouldn't spend their new free time exercising – they'd get a second job or spend the time on their devices.

Nevertheless, it's good enough for 8 or possibly 9.

- fully addresses all parts of the task
- presents a fully developed position in answer to the question with relevant, fully extended and well supported ideas

Band score 9 TR

ADVICE ON BRAINSTORMING FOR TASK 2

As you're planning and writing your answer, remember to constantly ask yourself if you're answering the question. Check back to the question a few times as you think of ideas to make sure they're directly relevant.

- **Make sure your introduction directly addresses the question.**
- **Make sure your ideas address all parts of the question. If the question asks for solutions, in the plural, you must suggest at least 2.**
- **Make sure your main ideas, as stated in the first sentence of the main body paragraphs, are directly relevant to the question.**
- **Make sure your supporting ideas, which follow the main ideas in the main body paragraphs, directly support the main idea.**
- **Be especially careful if you've answered similar question before, as there will always be important differences.**
- **Make sure your conclusion directly answers the question, that it is consistent with the ideas in the main bodies, and that it does not contradict the introduction.**

In a world increasingly defined by technological advancements, a sedentary lifestyle is becoming increasingly common globally, with many individuals suffering from several health issues. To address this worrying trend, a recalibration of values that prioritise human well-being is urgently needed. [TG1]

What begins as an inactive lifestyle gradually turns into simple but serious consequences: when people move less, they are more likely to suffer from cardiovascular diseases, overweight, and obesity[TG2] . What is more destructive is that inactive individuals may also be vulnerable to mental health issues, as they are often withdrawn from meaningful social activities. These health issues together may have a

cascading effect on every aspect of life. For individuals, these challenges mean lower quality of life. For societies consisting of such members, this means inadequate human capital, lower productivity, and ultimately stagnant economic growth. [TG3] [TG4]

At first glance, education programmes or social campaigns to raise awareness of individuals of the detrimental effects of a sedentary lifestyle seem to be straightforward and convenient. [TG5] However, these solutions often merely scratch the surface. An inactive lifestyle is never random. It is often a downstream consequence of a broader malaise, in this case, the increasingly competitive global economy which glues many to their desks in order to produce more. As such, merely asking people to live more healthily is philosophically shallow. In my view, interventions at institutional levels are needed.

Governments must require firms to adjust their policies to allow their workers to have more quality time to focus more on healthier lifestyles. [TG6] In China, the saturated labour market has forced many to work more than ten hours a day, leaving them with little room for meaningful physical activities. Only when situations like these change can we hope that individuals will focus more on active lifestyles. [TG7] [TG8]

In conclusion, a sedentary life style is often linked to health issues, but it should be seen as a threat to the human capital of every country. To encourage individuals to adopt healthier ways of life, we need to look upstream at how the modern economic system is designed. Until governments, alongside firms, recalibrate their priorities, any education or social programmes will still remain performative optics which bring little result. [TG9]

C&C - Cohesion and Coherence nb GRA and LR errors have not been corrected

Band score 9

Excellent cohesion and coherence throughout, with no errors.

The sentences have a natural flow characteristic of high band score answers.

PARAGRAPHING FOR TASK 2

I recommend you write 4 paragraphs as follows:

- Write an introduction, that explains what the question is. After reading the introduction, the reader should have a good idea what the essay is about, and what your position (opinion) is. It should be possible to write an introduction in under 50 words. It is not necessary to write a long background statement.
- Write 2 main body paragraphs. This should allow you to expand on the ideas sufficiently to persuade the examiner that you've fully supported the main ideas. If you write 3 main bodies, it is more difficult to expand and support them sufficiently to get a high score.
- If it's a two-part question, answer the questions in the order they're given and write one paragraph per question.
- The main body paragraphs should be 100-120 words, and each paragraph should have a clear topic sentence and 2 or more supporting ideas which support the topic sentence with reasons, evidence, and examples. Do not waste time with lots of background information.
- The topic sentences should directly address the question.
- The conclusion should be consistent with the introduction and the main ideas, and it should not introduce new ideas. It should directly answer the question. Do not leave the examiner in any doubt about whether you've answered the question.
- If you write a third paragraph in a *discuss both sides* question to clarify your position, make sure that give a good reason to reject one of the sides. If you just restated the original ideas about one side, the examiner may decide you have covered one side more than the other.
- It is also ok to write a third body paragraph in a *to what extent* question if you have main ideas which both agree and disagree with the proposition. Avoid short paragraphs, with under 70

words, as it may be difficult to show a *clear central topic* in a short paragraph.

In a world increasingly defined by technological advancements, a sedentary lifestyle is becoming increasingly common globally, with many individuals suffering from several health issues. To address this worrying trend, a recalibration of values that prioritise human well-being is urgently needed.

What begins as an inactive lifestyle gradually turns into simple but serious consequences: when people move less, they are more likely to suffer from cardiovascular diseases, overweight, and obesity[TG10] . What is more destructive [TG11] is that inactive individuals may also be vulnerable to mental health issues, as they are often withdrawn from meaningful social activities. These health issues together may have a cascading effect on every aspect of life. For individuals, these challenges mean lower quality of life. For societies consisting of such members, this means inadequate human capital, lower productivity, and ultimately stagnant economic growth. [TG12]

At first glance, education programmes or social campaigns to raise awareness of individuals of the detrimental effects of a sedentary lifestyle seem to be straightforward and convenient. However, these solutions often merely scratch the surface[TG13] . An inactive lifestyle is never random. It is often a downstream consequence of a broader malaise, in this case, the increasingly competitive global economy which glues many to their desks in order to produce more. As such, merely asking people to live more healthily is philosophically shallow. In my view, interventions at institutional levels are needed. Governments must require firms to adjust their policies to allow their workers to have more quality time to focus more on healthier lifestyles. In China, the saturated labour market has forced many to work more than ten hours a day, leaving them with little room for

meaningful physical activities. Only when situations like these change can we hope that individuals will focus more on active lifestyles. [TG14]

In conclusion, a sedentary life style is often linked to health issues, but it should be seen as a threat to the human capital of every country. To encourage individuals to adopt healthier ways of life, we need to look upstream at how the modern economic system is designed. Until governments, alongside firms, recalibrate their priorities, any education or social programmes will still remain performative optics which bring little result.

LR- - Lexical resource nb Some GRA errors have not been corrected

Band score 8

You seem to think you need C2 English to get a band score 9, and you don't. If you aim for C2, you'll get so many words wrong that they can't be put down as minor slips.

Vocabulary is used accurately with sufficient flexibility to show precise meaning, and with only minor inaccuracies, which is good for a band score 8

In a world increasingly defined by technological advancements, advances [TG15], a sedentary lifestyle [TG16] is becoming increasingly common globally, with many individuals suffering from several [TG17] health issues. To address this worrying trend, a recalibration of values that prioritise human well-being is urgently needed.

What begins as an inactive lifestyle gradually ends up with turns into simple but serious consequences: when people move less, they are more likely to suffer from cardiovascular diseases, overweight, [TG18] and obesity. What is more destructive is that inactive individuals may

also be vulnerable to mental health issues, as they are often withdrawn [TG19] from meaningful social activities. These health issues together may have a cascading effect on every aspect of life. For individuals, these challenges mean a lower quality of life. For societies consisting of such members, this means inadequate human capital, lower productivity, and ultimately stagnant economic growth.

At first glance, education programmes or social campaigns to raise the awareness of individuals of the detrimental effects of a sedentary lifestyle seem to be straightforward and convenient. However, these solutions often merely scratch the surface. An inactive lifestyle is never random. It is often a downstream consequence of a broader malaise, in this case, the increasingly competitive global economy which glues many to their desks in order to produce more. As such, merely asking people to live more healthily is philosophically shallow [TG20]. In my view, interventions at institutional levels are needed. Governments must require firms to adjust change [TG21] their policies to allow their workers to have more quality time to focus more on healthier lifestyles. In China, the saturated labour market has forced many to work more than ten hours a day, leaving them with little room for meaningful physical activities [TG22]. Only when situations like these change can we hope that individuals will focus [TG23] more on active lifestyles.

In conclusion, a sedentary life style is often linked to health issues, but it should be seen as a threat to the human capital of every country. To encourage individuals to adopt healthier ways of life, we need to look upstream at how the modern economic system is designed. Until governments, alongside firms, recalibrate their priorities, any education educational or social programmes will still remain be seen as performative optics which bring little in the way of changeresult.

GRA – Grammatical range and accuracy nb Some LR errors have not been corrected

Band score 9

Grammar is used accurately with a wide variety of structures, which should be good for a band score 9.

Punctuation is used correctly throughout.

Appropriate structures are used throughout.

Errors are rare and occur as minor slips.

In a world increasingly defined by technological advancements, a sedentary lifestyle is becoming increasingly common globally, with many individuals suffering from several health issues. To address this worrying trend, a recalibration of values that prioritise human well-being is urgently needed.

What begins as an inactive lifestyle gradually turns into simple but serious consequences: when people move less, they are more likely to suffer from cardiovascular diseases, overweight, and obesity. What is more destructive is that inactive individuals may also be vulnerable to mental health issues, as they are often tend to withdrawn withdraw[TG24] from meaningful social activities. These health issues together may have a cascading effect on every aspect of life. For individuals, these challenges mean lower quality of life. For societies consisting of such members, this means inadequate human capital, lower productivity, and ultimately stagnant economic growth.

At first glance, education programmes or social campaigns to raise the awareness of individuals of the detrimental effects of a sedentary

lifestyle seem to be straightforward and convenient. However, these solutions often merely scratch the surface. An inactive lifestyle is never random. It is often a downstream consequence of a broader malaise, in this case, the increasingly competitive global economy which glues many to their desks in order to produce more. As such, merely asking people to live more healthily is philosophically shallow. In my view, interventions at institutional levels are needed. Governments must require firms to adjust their policies to allow their workers to have more quality time to focus more on healthier lifestyles. In China, the saturated labour market has forced many to work more than ten hours a day, leaving them with little room for meaningful physical activities. Only when situations like these change can we hope that individuals will focus more on active lifestyles.

In conclusion, a sedentary life style is often linked to health issues, but it should be seen as a threat to the human capital of every country. To encourage individuals to adopt healthier ways of life, we need to look upstream at how the modern economic system is designed. Until governments, alongside firms, recalibrate their priorities, any education or social programmes will still remain performative optics which bring little result.[TG25]

Model answer –
