

Nowadays, there is a great controversy as to/whether or not the results of academic and business research and the business world should be shared to the public or not. I believe that both sides of view/viewpoints are reasonable and it is worthy/worthwhile to discuss the pros and cons of these two opinions.

As for the standpoint of people should share this information as much as possible, there are two advantages of this argument. Supporters of sharing as much information as possible point out the potential progress for all mankind. For one thing, First of all, resource sharing/sharing resources is beneficial to cultivating the development of a gifted people/individuals. For example, many 21st century entrepreneurs such as Elon Musk and Jack Ma utilized the resources provided online related to advances in information technology to found innovative companies and greatly influence society. Talents may discover the aspects that they are interested in according to the shared information of researches in different fields. In addition, it will. The result of such sharing is make a progress on for the entirety of society.

For instance, the whole world is going through the the entire world has been confronting the novel New Coronavirus for the last year. At this moment, the research and development of vaccines is extremely significant. Countries who share their vaccines will improve the public health of all individuals, which is respectful and admirable/worthy of respect and has clear implications in terms of saving actual lives.

However, some people/critics contend/consider that it is not supposed to share some information is too valuable or potentially hazardous, precious and significant information, which could be supported by two perspectives. At first/Firstly, it is risky for some governments, scientific research institutions and enterprises to spread some related information/reveal proprietary information. Revealing important business messages/secrets and internal communications could be pose a threat for the companies/for competition. Even worse, the disclosure of nations will likely endanger the safety of residents, which may and potentially trigger some serious international conflicts. On the other hand, plagiarism will/can be harmful to intellectual property protection. Some/The interests of writers could be stolen easily by some 'thieves' are especially relevant as loss of their creative output, which will threatens the environment of the whole society/the public good, especially the academic one/in terms of academics.

In conclusion, I believe the categories of information decide whether it is supposed

Comment [Dave1]: like its uncountable

Comment [Dave2]: more concise like this

Comment [Dave3]: good enough paraphrase of the topic - small grammar and vocabulary mistakes

Comment [Dave4]: ok

Comment [Dave5]: sit in the middle with their opinion - if you sit in the middle, you will get 3/4/5 for task achievement

Comment [Dave6]: better to have it here

Comment [Dave7]: verb phrase - ing

Comment [Dave8]: two advantages are harder to support both. if you have 2 children, you can only support each child half as much. but if have 1 child, you can support the child fully. your task achievement score is all

Formatted: Font: Bold

Comment [Dave9]: try to include the main

Comment [Dave10]: benefits everyone

Comment [Dave11]: progress

Comment [Dave12]: a little more academic

Comment [Dave13]: verb phrase starts with

Comment [Dave14]: good explaining

Formatted: Superscript

Comment [Dave15]: have a specific example

Comment [Dave16]: too general and vague

Comment [Dave17]: keep stating the result

Comment [Dave18]: excellent example!

Comment [Dave19]: more like this!

Comment [Dave20]: United States or

Comment [Dave21]: try to have the main

Comment [Dave22]: company that makes

Comment [Dave23]: keep your claims weak

Comment [Dave24]: don't list ideas

Comment [Dave25]: easy to just focus on

Comment [Dave26]: 3 ideas is too many

to be shared or not. In my opinion most information related to the advancement and development of society should be public, with the exception of Some results related to national security and pertinent business secrets. should not be spread to the public, while some information that will advance the development of society should be demonstrated to the public.

Comment [Dave27]: overall opinion - information should be shared (but some exceptions)

Comment [Dave28]: band 4/5 for task achievement

1 main idea and 1 example per paragraph is ideal

Takeaways:

Work on developing your ideas with examples like the Coronavirus one

try to use more academic vocabulary

make sure the topic sentence has a clear main idea at the end

have a clear overall opinion

<https://howtodoielts.com/recent-ielts-writing-topics-2020/>

focus on 1 area at a time

look at the question - write your opinion (4 or 5 times and then you will feel comfortable, make the habit)

improve your examples

take a look at a topic

write down 1 long example (2-3 sentences long)

check with the sample answer

300 words - good!

for task 2 most students don't develop their main ideas fully and specifically

Task achievement: 5/6

Cohesion/Coherence: 6

Vocabulary: 6

Grammar: 6

Overall: 6

Comment [Dave29]: make sure that you have a clear overall opinion to force the examiner to read your writing carefully. (overall, it is more important to ... despite the risks...)

Formatted: Font: Bold

Formatted: Font: Bold

Comment [Dave30]: sometimes too informal

Comment [Dave31]: these 3 are closest to getting to 7

Comment [Dave32]: all in the 6 range
